*Reach out to Dr. Zuzana Bic at zbic@hs.uci.edu for questions about course offerings, or contact Arturo Razo atarturor1@uci.edu to find out if the program can fit in your plan of study.

PH 101 Introduction to Epidemiology - 4 units

Karen Edward, Ph.D.

The distribution of disease and injury across time, space, and populations. Covers basic concepts and methods of descriptive epidemiology including the natural history of disease, data, and indices of health.

**Matthew Landry, Ph.D.,
RDN, FAND**

PH 159 Public Health Nutrition - 4 units

The what, why, and how of public health nutrition. Specifically, learners will examine what are the foods that people choose to eat based on dietary guidelines and perceptions about healthy dietary patterns, why people eat the foods they do by examining food politics, marketing, and disparities that exist within the food system, and how to make people's diets better by examining evidence-based solutions that target perceptions, behaviors, and the built environment. Concepts in the course are explored at the individual level and the population level – from clinical practice to epidemiologic research to national policy.

Optional Course

PH 198 Directed Studies - 2 units

Student participation in a series of research-related activities performed in an individual or small-group setting under the guidance of a faculty advisor.
